

# The Enterprise AI Operating System

Build, integrate, deploy, govern, and operate AI at scale, in your own environment.

## AI Has Entered Core Enterprise Operations

As AI moves from experimentation into day-to-day enterprise workflows, the challenge is no longer just building AI. It is operating AI securely, continuously, and at scale - inside the enterprise.

Data Science Wizards (DSW) addresses this shift with the DSW Enterprise AI Operating System, designed to help enterprises operate AI as a long-running, governed system, not as isolated projects or tools.

## What the Enterprise AI Operating System Enables

With a single subscription, enterprises can:

	<b>Create own AI-native infrastructure</b> Deploy the Enterprise AI Operating System entirely within your environment: on-prem, cloud, or hybrid.		<b>No vendor lock-in</b> Retain full ownership of source code, artifacts, and IP - no forced ecosystems, no outbound learning.		<b>Unlimited AI use cases without cost-per-use barriers</b> Build, deploy, and operate unlimited AI and GenAI use cases under a single subscription.		<b>From fragmented AI to one governed runtime</b> Unify models, agents, tools, and workflows under a single governed runtime - auditable, traceable, and reversible
---	--	--	---	--	---	--	--

**AI moves from experimentation to operable enterprise capability.**

## Full Enterprise Custody. By Design

Everything built on the DSW Enterprise AI Operating System remains **fully owned by the enterprise**. This includes:

 Models and agents

 Pipelines, workflows, and features

 Event-driven architectures (EDA)

 All associated source code and artifacts

There is no vendor lock-in.

**Your AI assets remain in your custody - today and over time.**

# Freedom to Build Your Own AI Ecosystem

Through the AI Fabric, enterprises are free to:

- Operate audit-ready AI systems by default, with reduced operational and regulatory risks
- Plug in any third-party tools of their choice

- Build AI capabilities internally or integrate externally developed models and agents
- Move AI from pilots into production faster, and scale securely

**The result is an AI ecosystem shaped by enterprise needs, not a vendor's roadmap.**

## Designed for Regulated Enterprises. Proven in BFSI

Built for environments where security, compliance, auditability, and control are non-negotiable. Governance gets enforced during execution, not reviewed later.

## How the OS exactly Operates?

**The DSW Enterprise AI Operating System does not replace Linux, Windows, or Unix.**

Traditional operating systems make compute operable at scale. And it stays. DSW sits on top of it and makes your AI models, agents, data, decisions, workflows, and execution - operable at scale.

**Always-On AI. Built as Infrastructure.**

Cut TCO by up to **60%**

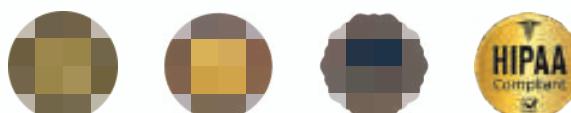

Achieve **50%** faster AI go-live

Operate and Scale **AI in days**

## Enterprise-Grade Security & Compliance
